INTERNSHIPS

Web Developer | Nexus PVT, LTD

2023 - PRESENT

- Web Developer Interns in a remote setting at Nexus Private Limited contribute to real projects, collaborating virtually with the development team. Engaging in hands-on coding and debugging, interns gain experience in both frontend and backend development. This remote internship offers mentorship, professional growth opportunities, and exposure to the full web development life cycle.

Software Developer | Retch Solutions PVT, LTD

2023

- During my Python training internship, I immersed myself in practical applications of the language, applying theoretical concepts to a variety of real-world projects. From web development to data analysis, I engaged in diverse assignments that not only expanded my skill set but also provided a comprehensive understanding of Python's versatility.

RELEVANT ACADEMIC RESEARCH AND PROJECTS

Automate Weather Classification using Transfer Learning | Transfer Learning

2023

- Develop and execute comprehensive marketing strategies and campaigns that align with the company's goals and Transfer learning can be used to automate weather classification by using pre-trained models from other tasks to extract features from meteorological data. This approach can improve classification accuracy and speed up model training. Transfer learning can also create image classification solutions using small datasets..

Job search application | Full Stack Development

2023

- This project is to provide a online job portal for employees and fresher's about opportunities in different companies. This system can manage job vacancies, job details , bio data ,interview, call letter etcand advance service we are providing SMS integration.This system is very useful for users because they need to submit resume through there account and all uploaded resume through are visible to other users and visitors who provide job opportunities.
